HOSPITALITY CAST™
by Hospitality WiFi

Casting content from guest devices to hotel TVs or even streaming directly on hotel TVs can get complicated with issues like security and privacy. But with HospitalityCast™, our managed solution takes away those headaches, offering easier management for your staff and better privacy for your guests.

Solution	Convenience	Privacy	Physical Security
HospitalityCast managed solution	Chromecast devices are already connected and configured for each room/TV Guests connect automatically to the device(s) in their room – multiple connection options available	All devices are isolated using network isolation and security techniques Guest can only cast to the device(s) in their own room – additional security layer means devices are not visible outside their assigned room No need to clear login information after each guest	Multiple anti-theft options available to prevent theft of devices from rooms
Streaming on hotel TV (using pre-installed apps)	Guests must enter username and password information using remote Staff must make sure guest login information is cleared after guest leaves Guest can only use apps that are pre-installed on TV	Risk of exposing login information if guest/staff doesn't clear logins at checkout	NA
Guests bring their own devices (BYOD)	Guests must connect device to TV Guest must call support to get device onto network	Device not segregated from guest WiFi network – anyone can see it & if security is not correctly set, anyone can push content to that device	NA
Hotel hands out devices for guests to borrow	Guests must connect device to TV Guest must locate device in list of all available devices before connecting	Device not segregated from guest WiFi network – anyone can see it & if security is not correctly set, anyone can push content to that device	No easy way to keep guests from leaving with or losing borrowed devices

HospitalityCast – For a Better Guest Experience That's More Like Home
